PRESS RELEASE

Fabritecture Tensile Membrane Canopy a Key Feature of ITE College Singapore Development

(Choa Chu Kang, Singapore – February 15, 2010) – Fabritecture Pte Ltd, Singapore, has this week completed the installation of a 3,000m² fabric membrane canopy at the Institute of Technical Education (ITE) College.

Working for Gammon Pte. Ltd., as part of a US \$190M project, Fabritecture has been managing the design and pre-fabrication of the fabric membrane works for the past twelve months.

The brand new ITE College incorporates flexible and adaptable learning spaces allowing multiple configurations to support changing curriculum requirements and teaching methods. It will include a campus housing 7,200 full-time, 8,100 part-time students, and around 630 staff. The canopy has been chosen as a cover over the 5-storey campus plaza for its natural transmission of light, UV and weather protection, and aesthetic appeal.

UFS Projects Director Jethro Jones is heading up this innovative project, which sees the launch of Fabritecture's presence in the Asian market.

Fabritecture, with offices in Europe, the Middle East, USA, Singapore, and Australia, is a global leader in the design, manufacture, and installation of state-of-the-art tensile fabric structures. Fabritecture's reputation for innovation is recognized globally, through numerous industry awards for design excellence. With unsurpassed project management expertise and commitment to service excellence, Fabritecture continues to meet and exceed client expectations in the delivery of first-class creative sustainable fabric architecture.
